Derived from: De-oiled Mustard Seed Meal

Natural fertilizer manufactured from “De-oiled Mustard Seed Meal” for use pre-plant and post-plant on Strawberries, Pineapples, Tree fruit (Pome and Stone), Caneberries, Blueberries, Root crops (carrots), Grapes, Tuberous vegetables (Potatoes), and Fruiting vegetables (Tomatoes and Peppers).

General Information:

MustGro™ 5-1-1 Fertilizer is a dry granule fertilizer to be applied as a pre-plant or post-plant application.

Crops:

Strawberries, Grapes, Pineapples, Tree Fruit (Pome and Stone), Caneberries (including Raspberries), Blueberry (Highbush), Tuberous vegetables (Potatoes), Root vegetables (Carrots), Fruiting vegetables (Tomatoes and peppers).

Pre-Plant applications of MustGro™ 5-1-1 Fertilizer

Application Directions:

MustGro™ 5-1-1 Fertilizer must be applied dry by using a calibrated spreader that will distribute the product evenly and uniformly. Do not mix the product with water prior to application. Immediately after application, watering must be followed as recommended. MustGro™ 5-1-1 Fertilizer is stable when it is dry, but will activate when it is wet. If possible, MustGro™ 5-1-1 Fertilizer should be applied to a dry soil surface. The amount of water required after application is dependent on soil moisture content, soil type and fertilizer rate used. If the soil surface is wet before application, then less water will be required.

Application Rate:

Depending on soil tests & crop requirements, apply 500 to 2000 lbs of MustGro™ 5-1-1 Fertilizer per acre using a calibrated spreader directly to soil surfaces 12-14 days prior to seeding or transplanting. Do not transplant or seed immediately after treatment to allow product time to activate and work. Ensure uniform product coverage. For optimum results, incorporate the MustGro™ 5-1-1 Fertilizer in the upper soil layer to a depth of 4 inches (with lower use rates) or 6 inches (with high use rates) using a disc, rotary hoe or other cultivation equipment. Immediately after the application, apply water uniformly to the treated area until a soil depth of 4-6 inches is well moistened.

Do not transplant or seed directly after treatment.

To prevent phytotoxicity to transplants and germination seedlings only transplant and seed 14 days after treatment and watering.

Post-Plant applications of MustGro™ 5-1-1 Fertilizer

For use on established crops: Spread 1000 lbs of MustGro™ 5-1-1 Fertilizer per acre without touching the plant; if possible mix product into the soil as outlined above for pre-plant applications. Immediately after application, apply water as also outlined above for pre-plant applications.

Notes:

More than one application may be made per season dependant on crop nutrient requirements. Follow post-plant application instructions.

Cautions: Keep out of reach of children and pets.

Storage: Store in a cool dry place. Reseal opened bag by folding top down.
